2. RESEARCH METHOD

2.1. Data Source

Semantics is defined as the study of meaning. It deals with all linguistic aspects from words, phrases and sentences in language. Semantics is relatively of recent origin, being coined in the late 19th century from a Greek verb meaning “to signify”. The term ‘semantics’ it is a recent addition to English language.

2.2. Data Collecting Method

In this analysis, I use library research. I also take supporting materials by reading some books of semantics. I collect The Corrs’ albums and I read all the lyrics and I give the list from The Corrs’ songs. I take 16 song lyrics and they are All The Love in The World, Breathless, Irresistable, One Night, Radio, Runaway, So Young, Summer Sunshine, Would You Be Happier, The Hardest Day of My Life, Make You Mine, Only When I Sleep, Black is The Colour, Forever May Not Be Long, Heart Like a Wheel, and Looking Through Your Eyes.

2.3. Data Analysis Method

There are some steps in analyzing the sentences, they are:

1. Reading all lyrics in The Corrs’ songs that will be analyzed.
2. Giving the list to the sentences that have non-literal meaning.
3. Identifying the types of non-literal meaning found in the lyrics.
4. Interpreting the meaning of findings based on the context of each expression.
5. Making a conclusion from the result of analysis.
