In this thesis, I apply library research by searching and collecting the references that contain and support the topics from the library. I use books for my primary and secondary source of data. *To Kill a Mockingbird* is the main source of my analysis. My secondary source is from other books that related to prejudice. I also find suitable references from the internet to complete my analysis.

In doing this thesis, I use some steps as follows:

2.1 Data Collecting Procedure

The first procedure, I collect data by reading the novel thoroughly. I read the novel in English version and the translation version in order to have full understanding about what is being told about and to find out the prejudice that is contained in the novel. I underline and collect the important information from the novel such as the information about the characteristics of each character, the way the characters interact to one another, and the ideas how they face some events. I do the same thing with the related books and references. I mark the important information from those sources which has parallel analogies with the problems I will analyze.
2.2 Data Selecting Procedure

The second procedure is data selecting. All the information that had been collected were being selected, and only the data that very significant were used in the process of making the analysis of this thesis.

2.3 Data Analyzing Procedure

The last procedure is data analyzing. I apply analytical descriptive method. The analytical descriptive method is done by describing facts and continued by analyzing those facts. Etymologically, description and analysis means to elaborate. Nevertheless, analysis that have been given another meaning, not only to elaborate, but also to give the understanding and clarification sufficiently. The data analyzed by describing and continued by giving the sufficient understanding (Ratna, 2004:53). I analyze all the selected data to prove what has been planned in the objective of this thesis and finally I can draw the conclusion for this thesis.
